Creating Business

Transforming Lives

Innovation

SANkofa SANitation

Mission Statement:

Improving hygiene standards and living across impoverished communities in Ghana by empowering local entrepreneurs to combat open defecation.

Need:

- Open defecation rates are over 18% in Northern Ghana.
- Open defecation increases rates of sexual assault.
- Agriculture is 45% of Ghana's industry, making the high cost of fertiliser one of the biggest outlays for farmers.

Solution:

Teach entrepreneurs how to build our unique toilets that collect human waste, giving them the ability to sell low cost fertiliser from the waste collected.

Impact:

So far, we have built a prototype toilet in New Edubiase, improving the lives of 14 individuals.

CodeX

Mission Statement:

Improving the employability of young people with autism through teaching an engaging coding education.

Need:

- Only 16% of individuals on the autistic spectrum are in full-time paid work.
- 33% of the individuals not in work, want to change that.

Solution:

Educating young people on the autistic spectrum how to code along with insight into the industry.

Stiima

Mission Statement:

Providing access to electricity to charge lights and phones, increasing connectivity and work hours available in Kenya. Selling briquettes to reduce health risks from cooking.

Need:

- Lack of electricity.
- Health risks from cooking with unsafe cooking fuels.

Solution:

Selling affordable batteries that are charged by the heat from cooking, renting out lights, and empowering women to produce and sell briquettes.

Implementation

Foodprint

Mission Statement:

Tackling food waste and food poverty in Nottingham through an affordable, accessible social supermarket.

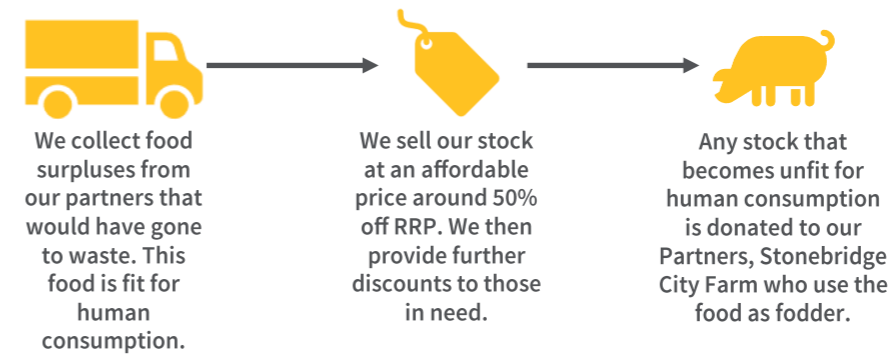

Need

- Foodprint began when we identified two key problems: food waste and food poverty.
- Over 6 million tonnes of edible food are thrown away every year in the UK.
 - More than 2 million people are malnourished in the UK.
 - Food waste accounts for 20 million tonnes of CO2 emissions every year in the UK.

Business Model

To address these problems, we launched a social supermarket in Sneinton, Nottingham.

Impact

We measure our impact by using our sales numbers and measuring the amount of food we have sold.

We have had the following impacts:
